Introducing Jump!Star featuring visiting artist George Ferrandi

September 13, 2019

September 16, 2019

The first half of this talk went over Ferrandi's previous work, all of which I found very interesting, but the second half focused on her current project, Jump!Star, which Wheaton students can get involved in. It is meant to be a multimedia celebration of the twelve stars that rotate between being the Earth's north star, with the current phase of the project being to create sculptures of characters or ideas that Ferrandi has picked out as representing each star. The sculpture Wheaton students have the opportunity to contribute on is the one that represents Iota, and the starting idea is "Familiar Mysteries". While I don't plan to get involved in this myself, it was a great introduction for me to the arts at Wheaton.
